RICCO™
COLLECTION

WARMTH OF RICHNESS

It is well established amongst the Architects and Designers that every now and then, we, 'Simpolo', brings new innovative ceramic products to the table. Here we are again, going a step closer to the richness, with the first of its kind, 'RICCO Collection' that is made with 'POSH Surface'.

'RICCO' consists of 18 extraordinary designs separated into three sub-collections according to their visual appeal.

18 DESIGNS

AN IDEAL SOLUTION FOR HEAVY TRAFFIC INDOOR SPACES

OFFICE AND
LOUNGE

SPA AND
SALON

HOTEL AND
RESTAURANT

We understand that for heavy traffic indoor spaces you need tiles that are highly durable and so we bring you the perfect solution with the Ricco collection. This collection is the ideal solution for heavy traffic areas.

RICCO™ COLLECTION

The Ricco Collection comes in two amazing sizes of 120x240cm and 120x180cm. These are designed keeping in mind the requirements of large spaces and heavy traffic in indoor areas. With these sizes of tiles, the installation process becomes easier and faster and it also gives your area a wide and uncluttered look as the grouting lines decrease.

iM⁺ TECHNOLOGY TOWARDS A BETTER YOU

While our control over the happenings in the world outside is quite limited, we must surely take onus of safety within our own happy place. Today, one's safety, health and wellness are amongst the greatest concerns globally, and this has given us an opportunity to innovate, and to come up with unique solutions that either eliminate or lessen the challenges we face each day.

Utilizing our latest production system, Continua+, we introduce you to a technology that removes uncertainties or doubts involving safety within your home - 'iM⁺ Technology'. The technology helps the product surface repel any liquid and does not allow unwanted or harmful living organisms to stay or grow. This water repellent and anti-bacterial surface created with 'iM⁺' requires the lowest maintenance efforts, keeping you from second-guessing your safety indoors.

CONFIDENTLY SMOOTH, COMFORTABLY ELEGANT.

As smooth as the breezing wind, 'POSH Surface' is yet another achievement for us. The exceptional surface is achieved with the exclusive and patented technology, 'Continua+', which is the first of its kind in India. It takes the surface quality to where no other technology can reach. Laying your hands on it will make you realize the elegance of the finish and you will understand how the 'Posh' feels like.

With this innovation, we have overcome the myth that smooth surfaces get scratches and stains. Despite having the unmatched smoothness, 'POSH Surface' is resistant to scratches.

Installation Suggestions

Traditional Floor Laying

Laying SIMPOLO Tiles requires similar laying conditions to those required for traditional formats. Requires the adhesive to be applied both on the setting bed and on the back of the tile.

SIMPOLO Tiles for flooring require the following conditions:

- A flat surface;
- Clean and free from dust, scraps and any lumps of cement;
- The setting bed must be uniform and have already undergone the drying shrinkage process;
- Repair of any cracks;
- Any uneven parts on the surface must be filled with suitable levelling compounds.

INSTRUMENTS REQUIRED

- Cement-based powder adhesive for full spread
- 3x3mm square toothed trowel and 15mm round toothed trowel;
- Frame with suction cups for handling or double suction cups;
- Non-bounce plastic mallet 170x370mm;
- Levelling system: base clip + wedge + pliers.

PROCESSING STAGES

BONDING TO THE FLOOR

- 1) Ensure that the surface to be covered is solid, flat and free from dust and oil/grease.
- 2) Use the adhesives described above mixed according to the specifications indicated in the technical data sheet of the chosen adhesive.
- 3) Spread the adhesive onto the surface to be covered with a 15mm round toothed trowel across an area of 5/10 cm more than the dimensions of the Tile.
- 4) With the tile in a vertical position on the handling frame, spread the adhesive onto the back of the slab with a 3x3mm square toothed trowel.
- 5) Using the frame with suction cups, bring the tile into a horizontal position and lay it.
- 6) To guarantee uniform bonding of the slab, the special 170x370mm non-bounce plastic mallet must be used, tapping from the middle towards the edges so as to remove any air pockets between the back of the tile, the adhesive and the surface to be tiled.
- 7) Using the levelling system.

LEVELLING SYSTEM

The levelling system aims to guarantee perfectly levelled floors simply and quickly, eliminating any unevenness between the tiles. The levelling system is strongly recommended for laying SIMPOLO Tiles.

Instruments required

- Base clip;
- Wedge;
- Adjustable pliers for installing floors/wall tiles.

Application of the levelling system

Positioning the base clip:

- a) After spreading the adhesive, insert the base clip below the SIMPOLO tile on the 4 sides.
- b) Depending on the format of the tile, position one or more supports for each side of the tile.
- c) Position the tile.

Inserting the wedge:

- a) Insert the wedge in the slot of the support, taking care not to exceed the breaking point.
- b) To make inserting the wedge easier, it is recommended to use the adjustable pliers.

Removing the support:

- a) Once the adhesive has dried, the protruding part of the support can be separated from the base clip by tapping with your foot in line with the joint.

GENERAL ADVICE FOR GROUTING

Pay attention while choosing joint sealants: check the technical sheets, choose them shade matched and follow carefully the recommended cleaning times, as many new generation coloured sealants contain pigments and additives that can be very strong. For polished/glossy surfaces do not use epoxy grouts or synthetic based flexible mortars (Flexfughe) and do not add additives/latexes to the grout, as they make the removal of residues with standard detergents very difficult. However, should you decide to use them, it is recommended to make a previous test off site.

Cleaning And Maintenance

Introduction

All SIMPOLO Tiles are easy to clean and maintain. Regular cleaning highlights the aesthetic features of the Tiles and gives the floor and Wall exceptional shine.

Initial Cleaning

The initial cleaning done immediately after the flooring laid is of essential importance for removing all mortar, adhesives and epoxy residues that may be left in the joints. In this initial phase, we recommend that you use an acid product such as Clenza, in a 1:5 concentration. Rub

energetically to obtain the maximum cleaning. After washing the floor, which is just as important, rinse thoroughly with plenty of water to remove all traces of the detergent used. These steps are recommended for all SIMPOLO collections.

Maintenance And Care

Thanks to the characteristics of the production process (high firing temperature, raw materials of great quality, sinterizing process), the surface of SIMPOLO material is waterproof (the water absorption is minimum). Therefore the dirt cannot penetrate but it is necessary to remove it from the surface. For this procedure do not use detergents containing waxes or waxing products, in order to avoid the

forming of greasy layers; for choosing the most appropriate detergent refer to the following chapters. After the installation of floors, particularly of those made with polished materials, the surfaces should be adequately protected with particle board or other suitable materials in order to protect them from dirt and on-site processing. This prevents damage caused by subsequent processing.

General Recommendations

For commercial and heavily used surface areas such as airports, hospitals, supermarkets, and any public spaces with heavy foot traffic which are thus subject to considerable soiling, it is necessary to use automatic cleaning machines with suction of the washing liquids. This allows not only deep cleaning, but also the continuous removal of liquids containing substances that cause soiling, thus preventing the formation of films which are very difficult to remove. Any detergent on the market can be used in the desired concentration for cleaning the high

technology sinterized SIMPOLO products, with the exception of HYDROFLUORIC acid (HF) or its compounds, according to UNI-EN 176 standards. In order to keep costs limited and speed up maintenance operations, the concentration of the detergent must always be as low as possible. For raised floors we suggest to choose bright or polished surfaces in large sizes: these materials can be dry cleaned or with the minimum use of liquids. After the floor is laid it is necessary to make a very accurate initial cleaning with proper products.

Posh/Matt Tiles

For these Tiles, after completing the steps described in the section "Initial Cleaning", you only need to clean the floor with hot water containing small quantities of an alkaline detergent such as Red Harpic & Clenza in a concentration 1:200. On these types of surface it is not advisable to apply

a waterproofing product: the absence of porosity causes the waterproofing agent to deposit on the surface in an uneven way and to have unpleasant aesthetic effects.

Commonly Affected Stains Guidance

For highly aggressive cleaning caused by some common food and substances follow the table below.

Sr. No	SUBSTANCES	NANO TREATED SURFACE	REGULAR SURFACE

* IMMEDIATE CLEANING ACTION IS THE BEST WAY
* CHEMICALS REFERENCE ARE FOR FIRST SUGGESTION FOR ANY DETAILS CONTACT COMPANY PERSONNEL
DO NOT USE THESE CHEMICALS WITHOUT CONSIDERING EXPERT SUGGESTIONS

Note: It is recommended that any kind of stain needs to get clean immediately / as soon as possible.

Sintering Technology

The latest Sintering Technology is capable of reaching very high temperatures up to 1225°C. and above, therefore the technical characteristics of ceramics are strengthened and amplified. The resultant product has high strength with certain amount of Elastic flexibility.

Impact Resistance

This material has incredible Strength, MOR is 40N/mm2 (Granite is 13.8N/mm2), breaking strength 2000N (at least 30% to 40% better than Granite) and an impact resistance of 0.55.

Zero Water Absorption (<0.06%)

The sintering at exceptionally high temperatures renders the product resistant to Scratching, staining and fading because of it's near zero water absorption (<0.06%) whereas in case of Granite, it is 0.15%.

Stain Resistant

Low porosity makes these sintered surfaces impervious to harsh chemicals like bleach, hydrochloric acid and other cleaning agents. Sintered slabs are able to withstand extreme heat and can be spray painted with no irreversible damage to the material.
